

The Museum of Natural History

Washington, D.C.

Presents:

Orchids through Darwin's Eyes

Location: First Floor

Exhibit: January 24, 2009 – April 26, 2009

Charles Darwin used orchids to help prove his theories of natural selection and evolution. Scientists today follow in Darwin's footsteps and use orchids to learn more about how plants have evolved and adapted to live in almost every type of environment around the world. Come explore the alluring world of orchids through the eyes of Darwin. Discover new insights and curious surprises about these captivating plants, including the only orchid fossil ever discovered! This exhibit has been developed in partnership with the Smithsonian's [Horticultural Services Division](#), Smithsonian's [Office of Exhibits Central](#), and the [US Botanic Gardens](#).

Dream Green Banners was here, there & everywhere...

Dream Green Banners are featured throughout the exhibit space.

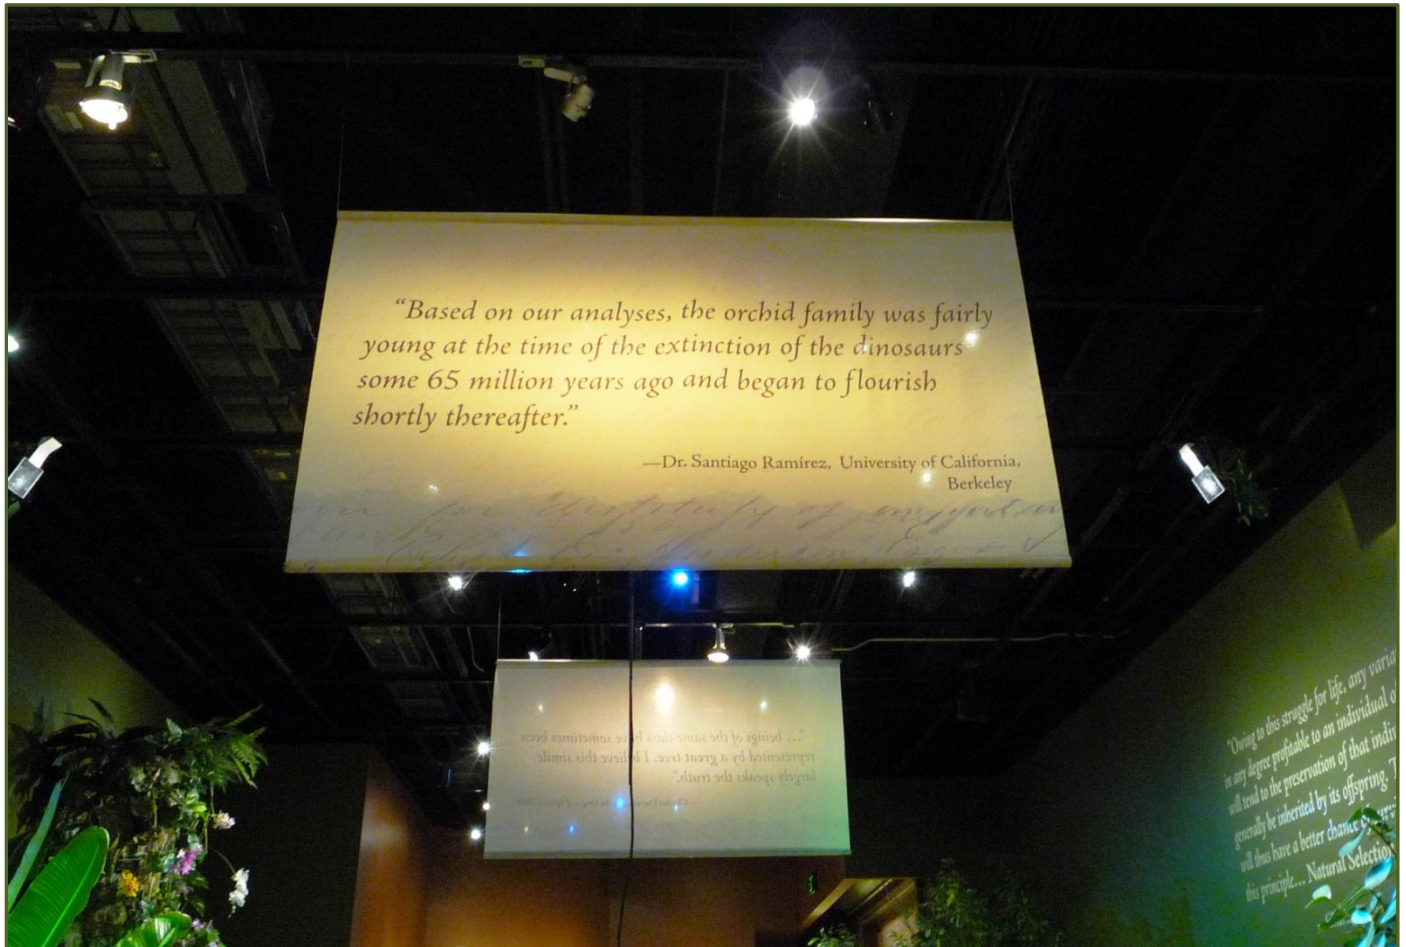

Made of 100% recycled post consumer plastic bottles, this unique product offers features ideal for extended presentation.

Made in the USA from bottle to banner.

The special textured 'canvas' surface eliminates reflection from spotlights and softens the viewing area.

Made from plastic but feels like cotton.

Fine detail and intense color saturation complete the presentation, suitable for the most discerning visitor.

Darwin would have approved.
